LEADERS IN HIGH PERFORMANCE COLD PATCH MATERIAL

- Ready to use
- Consistent
- Easy to manipulate
- Moisture resistant
- High performance
- No mixing required
- Superior strength
- 100% recycled
- Commercial grade
- Green

Yonkers Contracting

“Thank you so much for prompt services and extremely fresh material to work with”

Sicon Contractor's Inc.

“We are very pleased with the Patch-IT mix. It performs well and we find it easy to work with. Availability of the product is consistent and dependable. Being that it is environmentally friendly is an added bonus.”

Bedford Carp Construction, Inc.

“If you are looking for high value, performance and service its all about Patch-IT. We have been using it for temporary street repairs amongst others...It has stood up to its high performance, value added, eco-friendly characteristics beautifully.”

HOW IT STARTED

Patch-IT was founded in 2016 with the goal of supplying affordable material that is not only reliable for customers but also safer for the environment. Our product is produced out of Green Asphalt LLC, the nation's first plant to produce 100% recycled asphalt material. Using material from broken down roadways, the company eliminates the need for customers to purchase new materials and sending existing roads to landfills. Creating a cold patch material that is both workable and durable under everyday road conditions, involves a certain amount of understanding in the cold mix industry. Our brand works to adhere to “Durable. Consistent. Green.” Durable under all conditions, Consistent material to work with and most of all influencing an eco-friendly environment.

WHY PATCH-IT

Patch-IT is a modified recycled cold patch material. Patch IT mix is a high performance cold patch material produced out of recycled and processed asphalt pavements, including an engineered bio based rejuvenating oil out of Green Asphalt. This asphalt company is one of the only asphalt plants in the nation producing 100% recycled asphalt products approved by the New York State and City DOT/DDC.

One ton bags now available!

DEVELOPMENT

Patch IT has been developed and perfected through our application in the maintenance and repair municipal market over the last 3 years. The product sets up immediately after compaction and bags can be stored on shelf indoors for 1 year. Because Patch IT is moisture resistant, it also shows high durability under traffic and environmental loading compared to similar products. Patch IT is currently being supplied in bulk and bags, to municipalities, utility companies, construction companies, and utility contractors.

Halycon Construction Group

“We have been using Patch-IT in bulk for over a year and are very pleased with the product. Our workers say its extremely easy to lay the product down and once compacted holds up very well. Deliveries have always been on time on our orders...Thanks for the great service.”
